REASONS FOR ALLOWANCE

1. The following is an examiner's statement of reasons for allowance: the instant claimed method for identifying one or of a plurality of sequences differing by one or more single base changes, insertions, deletions, or translocation comprising , the use of plurality of oligonucleotide probe sets, each set characterized by a) a first oligonucleotide probe having an oligonucleotide target specific portion and an oligonucleotide addressable array specific portion, and b) a second oligonucleotide probe having an oligonucleotide target specific portion and a detectable label, wherein the oligonucleotide probes in a particular set are suitable for ligation together, but have a mismatch which interfere with such ligation when hybridized to any other nucleotide sequence present in the sample; and the use of ligase to ligate the probes, and the use of capture oligonucleotides in detection method, was neither taught nor suggested by the prior art. Of the prior art references submitted in June 2004, WO 93/20227 seems to be teaching the LDR method, however fail to teach the specific probe sets of the instant claims.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
